Foundations of Data

Learning Fixture

A small synthetic textbook for chapter-route evaluation.

Contents

1. Variables and Types 1

2. Means 2

3. Checking Results 3

The numbers above are printed page numbers.

Chapter 1: Variables and Types

Printed page: 1

Variables represent recorded observations.

Distinguish numerical variables from categorical variables.

Exercise 1.1: Classify age and favourite colour by variable type.

Chapter 2: Means

Printed page: 2

Prerequisite: Understand the variable types in Chapter 1.

Use an arithmetic mean for numerical observations.

Exercise 2.1: Find the mean of 2, 4 and 6.

Chapter 3: Checking Results

Printed page: 3

Check the variable type before interpreting a result.

Check whether the result is plausible for the observations.

Checklist: state the type, describe the calculation, check the result.

This chapter has no numbered exercises.
